

A usable theme for Ubuntu Desktop: Shiki

I never liked Ubuntu's Humanity theme, New Wave theme in 9.10 crashes some applications, like F-Spot, and both are brown. Now Lucid is about to make purple (sic!) it's default colour, so that's not for me as well. The solution: shiki.

I never liked Ubuntu's Humanity theme, New Wave theme in 9.10 crashes some applications, like F-Spot, and both are brown. Now Lucid is about to make purple (sic!) it's default colour, so that's not for me as well.

When I used to work with Windows XP, I used a theme named NeogenX^[1], from a deviantart publisher, dobee^[2], and I simply loved it. So I wanted to find something similar to that for Ubuntu.

I've searched through deviantart's customisation part^[3] for this, and I've found nothing. Fortunately, I came across with Ubuntu Tweak^[4], some kind of system management software for Ubuntu. It has a third party repository list from ppa, and there was a theme repository, named gnome-colors^[5]. Inside of it, there's a pack, shiki-colors^[6].

This is exactly what I was looking for.
