

Waterfall in a creek

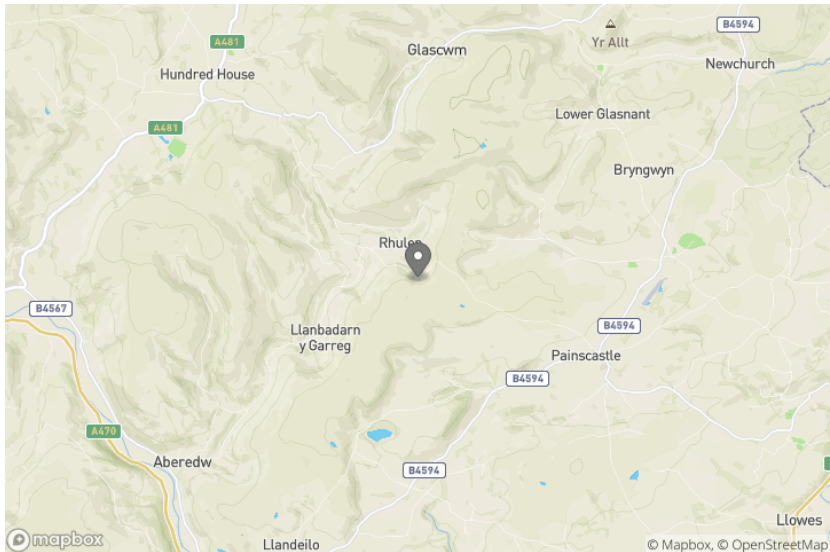

PENTAX K-5 II s, 14.0 mm, f/16.0, 1/20 sec, ISO 80 | smc PENTAX-DA 12-24mm F4 ED AL [IF] | CC-BY-NC-ND-4.0

I previously mentioned I went looking for waterfalls in Herefordshire, following markings on openstreetmaps. This was above the marked part of the waterfall, where it was mostly a stream, but I liked this part better, than the real waterfall - which, just to note, is basically dried out this time of the year.

I got to test our new lens, a Pentax 12-24mm (APS-C), and I'm quite positively impressed by the angle (18mm equivalent for full-frame) it's capable of capturing.

Note: it was hard to capture this without HDR, but I think it's all right.

coordinates: 52.133, -3.261
