

La Palma - panorama

PENTAX K-5 II s, | CC-BY-NC-ND-4.0

I barely ever had any GPS reception on La Palma so it's a little hard to tell where exactly the pictures were taken - pictures indeed, because this is a panorama stitched together from 3 handheld images from a DSLR by Hugin^[1]. I'm extremely impressed by that software: the 3 source photos were with different exposure, even their white balance differed a little yet Hugin put them together without a glitch.
